

A Guide To Lymphoma Clinical Trials

Massive Bio, Inc.

Understanding Lymphoma

Lymphoma is a type of blood cancer that attacks lymphatic tissue and affects lymphocytes, also known as white blood cells. There are two types of lymphoma, Non-Hodgkin's lymphoma, and Hodgkin's lymphoma. Non-Hodgkin's lymphoma represents 85% of all lymphoma cases in the United States.

Nearly 100,000 new cases of lymphoma were estimated in 2020 by the National Cancer Institute, and the 5-year relative survival rate is 72.6%. It represents 4.6% of all new cancer cases in the United States, as the 7th most common cancer type.

Lymphoma is more common in men than women and the median age of diagnosis is 67.

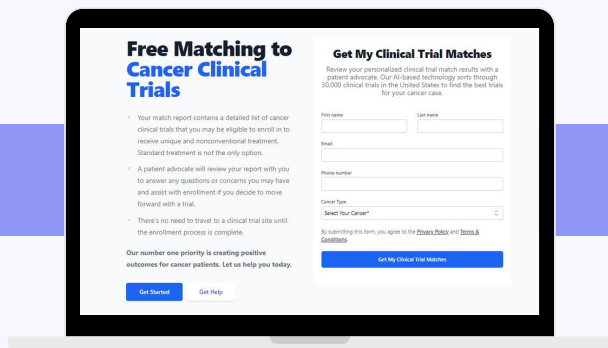

How Clinical Trials Can Help

There are approximately 800 clinical trials for lymphoma that are currently recruiting patients in the United States right now.

Current clinical trials are researching new:

- Targeted therapies for new biomarkers
- Combinations of chemotherapies with other drugs
- Immunotherapy drugs, such as CAR T-cell therapy
- Idiotypic vaccination

Participating in a clinical trial not only progresses much-needed research but gives patients access to these new innovative therapies years before the general population.

The screenshot shows a laptop displaying a website with two main sections: "Free Matching to Cancer Clinical Trials" and "Get My Clinical Trial Matches".

Free Matching to Cancer Clinical Trials

- Your match report contains a detailed list of cancer clinical trials that you may be eligible to enroll in to receive unique and nonconventional treatment. Standard treatment is not the only option.
- A patient advocate will review your report with you to answer any questions or concerns you may have and assist with enrollment if you decide to move forward with a trial.
- There's no need to travel to a clinical trial site until the enrollment process is complete.

Our number one priority is creating positive outcomes for cancer patients. Let us help you today.

How We Can Help

At Massive Bio, our mission is to enable cancer patients to have equal access to cutting-edge therapies and clinical trials, regardless of their location and/or financial stability.

Our Artificial Intelligence (AI) powered Clinical Trial Matching System connects patients and their treating oncologists to clinical trials according to their unique cancer case.

We enlist dedicated staff to collect medical records and treatment history and match patients to eligible trials near their home. We provide full support throughout your enrollment process to ensure logistics are handled so you can concentrate on your health.

Massive Bio Launches Industry's First NASA-Style, Oncology Clinical Trial Command Center

The National Cancer Institute Awarded Contract to Develop an Oncology Based Artificial Intelligence-Enabled Clinical Trial Recruitment Tool
